CAMPAIGN STRATEGY / 01

Useful project help. A natural next step.

A focused seven-day acquisition plan for Project DNA and the free “Build Your First AI Project in 60 Minutes” workshop.

500	7 days	INR 2,000
eligible student registrations	campaign window	spend ceiling

THE GROWTH IDEA

Students get a tailored project outcome before they see the workshop invitation. One path improves a project they already have; the other recommends a project for a role they want. The result page then offers a clear workshop next step and optional, user-initiated sharing. This gives each channel a useful reason to share beyond a generic registration link.

WHO / OFFER / ROUTE

AUDIENCE

Final-year engineering students across CSE, IT, AI/ML, ECE, EEE, Mechanical, Civil and related branches; prioritize students already building or exploring projects.

VALUE

A project makeover or three role-aligned ideas, shaped by experience, preferred technology, interests and available time.

CONVERSION

Useful result to visible workshop CTA to confirmed registration or clearly labeled demo flow. Optional referral follows; it never gates the result.

CHANNEL PLAN

CHANNEL	7-DAY TARGET	EXECUTION
College clubs / student representatives	200 registrations	Share a ready-to-forward invite, QR and source-specific link. Use only approved clubs/representatives; no unapproved incentives.
WhatsApp student communities	150 registrations	Post only with group/admin permission or where promotion is welcome. Use a trackable source link; do not bulk-message.
Instagram / LinkedIn	100 registrations	Publish short before/after project examples and role-specific hooks. Track each link; boost only a post with organic signal.
Optional referrals	50 registrations	Invite users who have received value to share a unique referral link. Sharing is voluntary and never required for access.
Total	**500**	Targets are planning hypotheses, not a forecast or achieved results. Reallocate based on eligible registrations by source.

SEVEN-DAY EXECUTION / 02

Test small. Then scale.

Use the first half of the week to validate the message and sharing routes. Hold paid spend until there is an organic signal. The product supports measurement; it does not guarantee 500 sign-ups.

DAILY PLAN

DAY	ACTION	DECISION / SIGNAL
1	Confirm the official workshop destination, eligibility wording, consent and source links. Prepare one role-specific project example.	Launch only after the CTA and registration handoff are accurate.
2	Share with a small set of permitted student clubs / representatives. Publish the first organic social example.	Check landing visits to result views to eligible registrations by source.
3	Try a second creative angle: “improve your project” versus “find a project for your role.”	Keep the variant with stronger qualified-result and CTA engagement.
4	Share in relevant WhatsApp communities only with permission. Ask reps for feedback on clarity.	Fix drop-offs or confusion before increasing reach.
5	If an organic post performs well, use up to INR 800 to promote that post. Otherwise keep the budget unspent.	Compare cost per eligible registration; stop if quality falls.
6	Post the strongest project example again with a new role/branch framing. Remind users about optional referrals.	Review source mix, duplicate rate and eligible share.
7	Close the campaign window; reconcile source totals and document what worked, what failed and what to change.	Report verified versus demo registrations separately.

BUDGET CEILING

ITEM	AMOUNT	CONTROL
Best-performing social post boost	INR 800	Only spend after organic tests show a useful signal.
Creative / QR materials	INR 300	Use free design tools first; record actual costs.
Approved campus print / outreach support	INR 500	Use only with campus and organization permission.
Contingency	INR 400	Hold until a measured need appears; do not force spend.
Total ceiling	**INR 2,000**	Planning amounts; spend is optional and subject to approval.

MEASUREMENT & GUARDRAILS

Primary: unique eligible final-year engineering registrations by source. **Funnel:** landing visits, path starts, results viewed, workshop CTA clicks, confirmed registrations, referral-sourced registrations. Review daily; use source-specific links.

Truth & safety: count only confirmed eligible sign-ups toward the goal. Label demo data clearly. No unsolicited bulk messages, scraping, guaranteed outcomes or unapproved rewards. The INR 2,000 / 500 target is an assessment constraint, not a promise.

Source: Project DNA PRD and implementation roadmap. Channel targets and spend are proposed starting assumptions; validate them against NxtWave approval and campaign data.
